

Greetings –

The Montana State Library is pleased to announce the release of our new Geographic Information website: <http://geoinfo.montanastatelibrary.org/>.

Things will continue to change throughout the next few months. The new website includes the complete MSDI collection of pages, aerial photo download pages, and our new searchable GIS data list. This web presence will continue to be updated over time. We will update more pages over time with a piecemeal approach due to size (800+ pages) and our timeframe to get the new site live (beginning of legislative session).

The former BMSC's web presence (<http://giscoordination.mt.gov>) will be taken down after the legislative session. You will see redirects already in place on that website.

The NRIS web presence (<http://nris.mt.gov/>) will be taken down after the legislative session and after other pieces are converted over to the new website. Redirects will be utilized.

Thank you,

Erin Fashoway
